

# Coming to you in 2020: clean energy from wind & solar!

## 2020 PROSPECTIVE CLEANPOWERSF SUPERGREEN PRODUCT CONTENT LABEL<sup>1</sup>

SuperGreen matches 100% of your electricity usage.

A percentage of SuperGreen's renewable energy content meets the minimum required of all energy providers under California's Renewable Portfolio Standard (RPS) rules. SuperGreen exceeds these requirements by including 100% State RPS-eligible renewable energy that also meets the Green-e® Energy certification requirement. 100% of SuperGreen's renewable electricity content is Green-e® Energy certified.

In 2020, SuperGreen will be made up of the following new renewable resources averaged annually.

### Green-e® Energy Certified New<sup>2</sup> Renewables in CleanPowerSF SuperGreen Product

Resource Type	Voluntary Renewables	Voluntary Generation Location	State Mandated Renewables	Mandated Generation Location	Total Certified Renewables
Wind	18%	California	33%	California	51%
Solar	49%	California	0%	N/A	49%
<b>Total</b>	<b>67%</b>		<b>33%</b>		<b>100%</b>

### Total Green-e® Energy Certified Renewables: 100%

1. These figures reflect the renewables that we have contracted to provide. Actual figures may vary according to resource availability. We will annually report to you before October 1 of next year in the form of a Historic Product Content Label the actual resource mix of the electricity you purchased.
2. New Renewables come from generation facilities that first began commercial operation within the past 15 years.

For comparison, the current average mix of resources supplying California includes: Eligible Renewables (31%), Coal (3%), Nuclear (9%), Natural Gas (35%), Large Hydroelectric (11%), and Unspecified Sources of Power (11%). This resource mix is an annual estimate prepared by the California Energy Commission based on the electricity sold to California consumers during 2018.

The average home in San Francisco uses 283 kWh per month.
